

Thinking of applying for an Apprenticeship, how about a role at Thales?

Thales creates advanced technology to help keep people safe and make life easier. We work on things like secure communications, high-tech transportation and smart security systems that protect airports, trains and even your data online. We make travelling safer, and information more secure for everyone. We have a variety of apprenticeship roles, including engineering, manufacturing, project & planning, business, finance, procurement and end user support, starting in September 2026 and applications are open now!

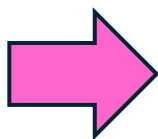

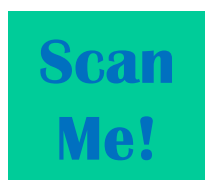

Want to learn more? Join us for an informative virtual event on Tuesday 20 January from 17.00 – 18.00

Our virtual event will include lots of information such as:

- **Thales and our different business areas**
- **the different future talent programmes available**
- **the benefits of working for Thales**
- **hints and tips on our application process**
- **hear from some of our apprentices**

Simply scan the QR code or follow the link to register:
